React Router

React Router

Most popular router for React

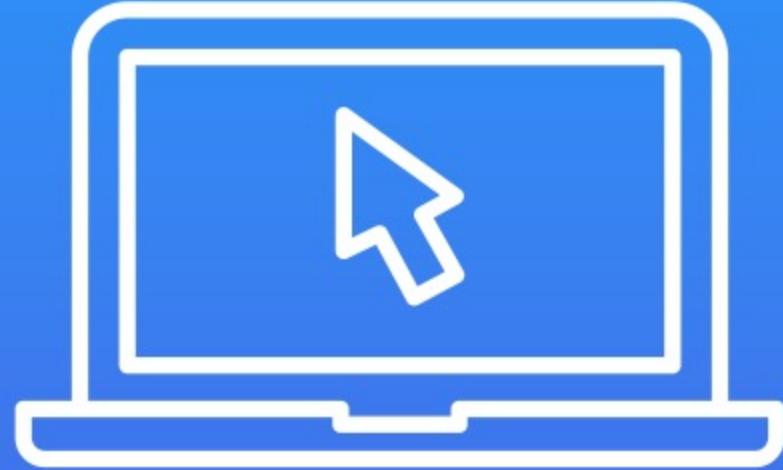

Not part of React

- Separate open source project

Fast, declarative client-side routing

Demo

React Router

- Create app layout
- Declare routes with placeholders
- Read URL parameters
- Handle 404s
- Implement links
- Redirect

Create product detail and cart pages

Summary

React Router

- Declare routes via `<Route>`
- Declared and read URL placeholders
- Use `<Link>` instead of anchor
- Handled 404s
- Redirect via `useNavigate`
